Hi John-

Here's what we are planning to do to address this. We have summary level cost estimate sheets for the SR 99 portions of Scenarios C and D. Those estimates correspond to the Mike Morrison summary cost sheet that was handed out at the SAC last night. They match the L and M hybrid scenario estimates because there were no changes to the SR 99 building blocks in those hybrid scenarios. We will provide both of those sheets in pdf format for you to forward on. Unfortunately we will not be able to provide costs for the SR 99 matrix directly, because the matrix is more of a configuration document than a list of projects or improvements that can be segregated out of the base cost estimate. We can provide a cover letter with an explanation, if that would be helpful in walking the reader through the information. I should be able to get this to you by Monday noon or so.

Alec

Hey everyone, please see the below legislative information request to Ron. I'm not sure if we ever got there in terms of populating Colin's revised matrix with costs, which is what is being asked for. Please chime in on our ability to respond to this, and any issues that we might need to address. I assume we need to respond by early next week.

**Subject:** AWW Hybrid Cost Breakdown

Good morning, Ron. I'm truly sorry to have to add to your work load, but I need some detailed cost data for the 2 hybrids.

More specifically: I'm looking at a handout we received yesterday -- a 3-page, double-sided document ("Hybrid Scenarios – Working Draft", dated 12/11/08) that details all the specific changes and improvements in each main building block. The first page addresses the SR 99 elements, the second page lists surface street elements, etc. A checkmark is placed in Column L (surface) and/or Column M (elevated) to indicate whether the specific change/improvement listed is included in one or both of the hybrids.

Can you modify this document by adding dollar amounts (or estimated cost range) associated with each change/improvement next to the description of each change/improvement, and email that document to me?

Thank you,  
Kathryn
