Attachments: South End Transition Design Parameter Summary(4-2-09).xls

John,

Here is the "summary design parameters" for the south end transition section that I just drafted up. Could you take a look at this and let me know if I am mistaken on anything. The cell in yellow was about the lane addition requirement that we talked about earlier. I can look into this quickly.

Joe

Joe,

I can't think of any specific topics to add. The design parameter spreadsheets are at the following fileserver location:

<\\Nwucwffile01\data\Viaduct\Engineering\South\Task Order SB\PC-34 Design Documentation\Work Products\D - Design Parameters>

Thanks,

John F.

John,

Do you have any topics that you would like to discuss today with ASDE? Right now we have the following possible topics: Environmental/Design Documentation Issues, Modifications to Transition Section (NB Alaskan Way movement and using NB section of SB1 bridge in final configuration), preliminary design characteristics, stage 1 - proprietary (maybe).

Also, do you have a copy of the spreadsheet that you used for the design parameters so that I can highlight some key things that we discussed yesterday?
