Another historical one. I'm pretty sure I've already sent you the attachment and mentioned to you that Alec was involved, but this Email gives you have documentation of who was involved in the discussion at the time.

Based on the discussion we had last Friday, the attachment conveys the approach we are proposing to take in the next round of discussions with City staff on permitting and design review. This approach would be substantially the same for all upcoming AWW projects.

Please take a look at the attachment and let me know if you have any questions or concerns about any of this. We are meeting with Sandy Gurkewitz this Thursday (tomorrow) afternoon, so would appreciate your input before that if possible. Note that Sandy specifically asked to meet only with the Environmental team first prior to meeting with design teams, so follow-up meetings with City staff and design teams will be scheduled for full discussion and involvement of all parties. The most critical project to discuss with the City will be the north end project with 30% design plans due out on September 28th. Thank you.
