PROJECT DESCRIPTION

Construction of the "Moving Forward" projects on the Alaskan Way Viaduct and Seawall Replacement Program will impact the movement of people and goods. Transit enhancements and other improvements will be implemented to mitigate these impacts.

Formatted: Font: (Default) Times New Roman

This project will implement components of active traffic management "speed harmonizationsign safety" by constructing 15 monotube sign bridges (gantries) that will accommodate variable speed limit signs over each lane along with other signing and ITS improvements in order to implement "speed harmonizationsign safety". This project will construct the gantries and civil components and a subsequent Design Build project will provide the remaining signing, electrical, and communication elements.
