Matt,

I'm trying to be responsive to Tom Tobin and finish up cost estimates and task order amendment scope language for the active task orders under the HMM contract.

You had recently informed me of your intent to have Vic take a design-delivery role of some type concerning the north and south portals of the bored tunnel. This would shift time away from our construction management task order and into our design management task order.

You asked me to hold on anything on my end until you spoke to Alec and Ali about this. Have you done that and should I revise our task order language accordingly? Also, would you agree that I should split Vic up 50 / 50 between CM and design; or what other split would you suggest? I would also think that this assignment would begin on or about April 1st once the contract strategy workshop has issued its report. Do you concur with that date?

Thanks.
