**Subject:** AWV IPM Report Second Draft

A second draft of the IPM Report has been posted to the Parametrix FTP site.

Here are instructions to access the FTP site:

1. Paste (don't click) the following address into **\*\*\*Windows Explorer\*\*\***, not Internet Explorer:  
<ftp://ftp.public.parametrix.com/AWV/IPMReport>  
The user name is: Client  
The password is: Integr1ty (note that the second "i" is a 1)
2. Do NOT try to open the files from within the FTP folder. Instead, copy the files to your desktop and open them there.

There are three files in the IPMReport folder:

- A pdf of the updated report, which has been revised per your comments, and includes many more images than the first draft
- A pdf of the 11 scenario maps. The bored tunnel hybrid map shows the twin bore with the surface boulevard, per Tri-Agency instructions
- A 11X17 table showing TSM/TSM/Pricing concepts, as requested. This table was shared with the stakeholders in June. The current thinking is to insert this table as a fold-out in chapter 4 of the report, between pages 23 and 24.

Please send comments to Jim and cc me by next Tuesday 2/24.

Please let me know if I can be of any assistance.

Thank you,

**Parametrix**

**Subject:** RE: AWW IPM Draft Report

A first draft of the IPM Report has been posted to the Parametrix FTP site. Because of the size of the file it is not possible to email it to many of you. The IPM report and related 11 scenario maps (which are inserts to the report) are saved to the FTP site in 2 PDF files. I feel the text and basic graphics are pretty much complete, but the final layout, including the addition of many of the visuals used with the SAC still needs work. I will bring hardcopies to tomorrow's Tri Agency meeting.

At the moment I feel document is too long and information on the Bored Tunnel Hybrid is still not internally consistent. To keep on schedule to finalize this by the end of next week, I need comments and edits by Friday 2/6.

Here are instructions to access the FTP site:

1. Paste (don't click) the following address into **\*\*\*Windows Explorer\*\*\***, not Internet Explorer:  
<ftp://ftp.public.parametrix.com/AWW/IPMReport>  
The user name is: Client  
The password is: Integr1ty (note that the second "i" is a 1)
2. Do NOT try to open the files from within the FTP folder. Instead, copy the files to your desktop and open them there.

Please let me or Colin Drake know if we can be of further assistance.

Thanks,
