Subject: FW: Use of Pier 48 for tunnel construction
Importance: High

Hey Matt!

See below. Just want you to know that we are going to need more information on Pier 48 in order to provide any clear information/guidance/scheduling implications.

Thanks!
Sasha

Subject: Use of Pier 48 for tunnel construction
Importance: High

Bill: The environmental team is preparing its overall strategy and the potential for in-water work is a critical issue. So we can be sure we are initiating the right studies and agency relationships please provide a brief description of how Pier 48, both uplands and over-water, could be used during construction of the bored tunnel. From several conversations I expect this may be range of activities or several scenarios describing different types of activities. Key information for us is the type of activity and the extent to which in water work, such as dredging or removing or placing pile, or over water work such as removing the existing structure or installing a new structure, is involved.

I would like an initial response by noon Tuesday March 17th, with a brief memo due COB March 18th. I realize this is very short notice but we have a series of meetings this week that need this information. Please let me know if you have an questions.
